Intense Colouring Photochromic 2H-Naphtho[1,2-*b*]pyrans and Heterocyclic Pyrans

The present invention relates to certain new photochromic pyran derivatives and to their use.

Photochromism is a well-known physical phenomenon which is observed with certain classes of chemical compounds. A detailed discussion of this phenomenon can be found in "Photochromism: Molecules and Systems," Studies in Organic Chemistry 40, Eds. H Dürr and H. Bouas-Laurent, Elsevier, 1990.

The 2H-naphtho[1,2-*b*]pyran system is known to be capable of exerting a photochromic effect as described, for example, U. S. Patent No. 3,567,605 and U. S. Patent No. 4,826,977. U. S. Patent No. 3,567,605 provides an example of a 2H-naphtho[1,2-*b*]pyran which remains coloured at ambient temperatures for several hours, and U. S. Patent No. 4,826,977 describes a series of yellow/orange colouring 2H-naphtho[1,2-*b*]pyrans containing a spiro-adamantane group at the 2-position, amongst other 2H-[1]benzopyran and isomeric naphthopyran systems. The basic structural unit of the 2H-naphtho[1,2-*b*]pyran system, in this instance substituted at C-2 with a spiro-adamantane group, is illustrated below.

A range of purple/blue colouring 2(4-aminophenyl)-2-alkyl-2H-naphtho[1,2-*b*]pyrans have been described in U. S. Patent No. 4,818,096 and European Patent No. 0,250,193 describes a range of photochromic naphtho[1,2-*b*] and [2,1-*b*]pyrans which bear one or two aminophenyl substituents on the carbon atom adjacent to the oxygen heteroatom. In this patent it is stated that substitution in the ring positions, sites 5 - 10, other than at site 6 has little influence on the photochromic behaviour of the compounds.

A series of photochromic 2H-naphtho[1,2-*b*]pyrans, amongst other 2H-[1]benzopyrans and isomeric naphthopyrans, bearing a cyclopropyl group as one of the substituents at the 2-position is described in article WO92/01959. It is also commented that the compound 2-cyclopropyl-2-*p*-methoxyphenyl-5-methyl-2H-naphtho[1,2-*b*]pyran and several other

analogues are of particular current interest, but no reasons were presented either to substantiate such interest or as to any significance of the 5-methyl group.

It is stated in U. S. Patent No. 5,066,818 (1991) that "The compound, 2,2-diphenyl-2H-naphtho[1,2-*b*]pyran, also colours on exposure to near ultraviolet light at room temperature but does not bleach in a reasonable period of time. Substitution of the phenyl substituents in the *meta* and *para* positions have little effect on the rate of bleaching of these compounds."

The very high optical density of 2,2-diaryl-2H-naphtho[1,2-*b*]pyrans achieved under irradiation and their slow attendant fade (bleaching) on removal of the source of irradiation relative to the photochromic properties displayed by the isomeric 3,3-diaryl-3H-naphtho[2,1-*b*]pyrans has been recently noted by B. van Gemert *et al.* (*Mol. Cryst. Liq. Cryst.*, 1994, 246, 67). The relatively slow attendant fade of the 2,2-diaryl-2H-naphtho[1,2-*b*]pyrans was rationalised by the absence of steric crowding in the ring opened (coloured) quinoidal/zwitterionic forms. Such steric crowding is thought to be present for the ring opened form of the 3,3-diaryl-3H-naphtho[2,1-*b*]pyrans and accounts for their relatively rapid fade.

Pilkington Brothers Limited have also commented on the fading of photochromic materials in Research Disclosure. Two structurally similar deep colouring photochromic 2,2-diaryl-2H-naphtho[1,2-*b*]pyrans, namely 2,2-bis(4-methoxyphenyl)-5,6-dimethyl-2H-naphtho[1,2-*b*]pyran and 2-(4-methoxyphenyl)-2-(4-trifluoromethylphenyl)-5,6-dimethyl-2H-naphtho[1,2-*b*]pyran are described, which exhibit markedly improved attendant fade compared with the non-methyl substituted analogues. These improved rates of fade are attributed to the combined presence of methyl groups at the 5- and 6-positions, which are said to exert steric pressures upon the ring opened (coloured) quinoidal/zwitterionic forms, thereby enhancing the ring closure to the uncoloured naphthopyran system. However, these fast fade materials described by Pilkington plc with substituents at both the 5- and 6-positions are difficult to make, requiring a long multi-stage process which renders them unattractive commercially. Thus the use of two substituents at the 5- and 6-positions to achieve rapid fade in these 2,2-diaryl compounds has the disadvantage of manufacture complexities.

Two recent U. S. Patents, 5,458,814 and 5,514,817 describe the synthesis of a range fast fading intensely colouring 5-substituted or 5,6-disubstituted 2,2-diaryl-2H-naphtho[1,2-*b*]pyrans and phenanthropyrans.

- 3 -

We have investigated these known photochromic compounds and have found that, for enhanced intense colour generation, compounds having 2-(aminoaryl)-2-aryl or 2,2-bis(aminoaryl) substituents are preferred. Also the presence of a 5-substituent in these 2,2-diaryl-2*H*-naphtho[1,2-*b*]pyrans ensures rapid fading of the red or orange colour generated upon irradiation.

According to the present invention, there is provided a photochromic compound of the formula I

I

In graphic formula I above, R¹ and R² are each selected from unsubstituted, mono-, di- or polysubstituted aryl groups, phenyl and naphthyl, preferably mono- or di-substituted phenyl or naphthyl. Additionally R¹ and or R² may be selected from the following heteroaryl groups, thienyl, benzo[*b*]thienyl, furyl, benzo[*b*]furyl, pyrrolyl, indolyl.

The substituents for the aryl and heteroaryl groups representing R¹ and R² may be amino, alkyl C₁ - C₅ amino, dialkyl C₁ - C₅ amino, arylamino, arylalkyl C₁ - C₅ amino, diarylamino and cyclic amino groups (for example, aziridino, pyrrolidino, piperidino, morpholino, thiomorpholino, indolino, piperazino, C₁ - C₅ *N*-alkyl-piperazino). Other substituents in addition to the specified amino function may include, in any remaining positions, hydrogen, C₁ - C₅ alkyl, C₁ - C₅ haloalkyl, C₁ - C₅ alkoxy, C₁ - C₅ alkoxy(C₁ - C₅)alkyl, amino-C₁ - C₅ alkyl, hydroxy-C₁ - C₅ alkyl, halogen.

Phenyl, aryl and heteroaryl ring substituents may be located at the *o*-, *m*- or *p*-positions. Typically each phenyl group contains less than 3 substituents.

R³ and R⁴ are hydrogen.

R⁵ may be selected from C₁ - C₁₀ alkyl, C₁ - C₁₀ haloalkyl, C₁ - C₁₀ perfluoroalkyl, C₁ - C₅ perfluoroalkenyl, C₁ - C₅ alkenyl, C₁ - C₅ alkynyl, C₁ - C₁₀ alkoxy, C₁ - C₁₀ perfluoroalkoxy, C₁ - C₅ alkoxy(C₁ - C₅) alkyl, C₁ - C₅ hydroxyalkyl, halogen, nitrile, nitro, amino, C₁ - C₅ alkylamino, C₁ - C₅ dialkylamino, cyclic amino (for example, aziridino, pyrrolidino, piperidino,

- 4 -

morpholino, thiomorpholino, indolino, piperazino, C₁ - C₅ N - alkylpiperazino), arylamino, diarylamino, aryl C₁ - C₅ alkylamino, C₁ - C₅ oxoalkyl, phenyl, aryl, substituted aryl, naphthyl, substituted naphthyl, aroyl, substituted aroyl, formyl, carboxyl, C₁ - C₂₀ alkoxy carbonyl, C₁ - C₅ haloalkyloxy carbonyl, aryloxy carbonyl, substituted aryloxy carbonyl.

R⁵ may also be selected from the alkenyl function illustrated immediately below:

Where R¹¹ and or R¹² and or R¹³ will be selected from those substituents specified for R¹ and R² in formula I. In addition to these substituents R¹¹ and R¹² and R¹³ may be selected from CN, NO₂, CHO, C₁ - C₅ alkoxy carbonyl, benzoyl, and phenylsulfonyl.

In graphic formula I R⁶, R⁷, R⁸, R⁹ and R¹⁰ may be selected from hydrogen, in addition to those groups specified for R⁵ above.

Typically, though not always, two or three groups selected from R⁷, R⁸, R⁹ and R¹⁰ are hydrogen.

In addition to the 2H-naphtho[1,2-b]pyran compounds of formula I, the present invention includes the isomeric phenanthropyrans of the general formula II and III and benzo[l]phenanthropyrans of the general formula IV

In graphic formula II, III and IV R¹ to R¹³ are as specified for graphic formula I and R¹⁴ and R¹⁵ may be selected from those substituents specified for R⁶.

- 5 -

In addition to the 2*H*-naphtho[1,2-*b*]pyran compounds of formula I, the present invention includes the isomeric heterocyclicpyrans of the general formula V and VI

V

VI

In graphic formula IV and V R^1 to R^{14} are as specified for graphic formula I and the heteroatom X may be selected from O, S, NH, and substituted N for example $C_1 - C_{10}$ alkyl, $C_1 - C_{10}$ haloalkyl, $C_1 - C_{10}$ perfluoroalkyl, benzyl, phenyl, tosyl, benzoyl, amino- $C_1 - C_5$ alkyl, hydroxy- $C_1 - C_5$ alkyl.

The photochromic properties exhibited by the novel pyran compounds of the present invention, namely those of high induced optical density and rapid bleaching of the red or orange coloured form, render these compounds particularly useful as photochromic materials for incorporation into polymeric host materials so as to impart photochromic properties to the said polymeric host materials. Examples of applications of the polymeric host materials containing photochromic materials of the present invention include the manufacture of lenses for sunglasses and ophthalmic lenses, optical filters and windows for vehicles such as cars (including sunroofs), aircraft and ships and architectural uses e.g. windows for homes and for photochromic 'stained glass' windows.

The photochromic pyrans of the present invention are incorporated into the 'plastic' host material by well established protocols for example as described in European Patent No. 0254020 or U. S. Patent No. 5,066,818.

The high induced optical density of the photochromic compounds of the present invention enables the amount of the photochromic material required so as to impart a useful degree of photochromism to a polymeric host material or to a solution to be greatly reduced, thereby enabling a considerable saving of synthetic effort and cost. Furthermore, the use of reduced quantities of the photochromic materials of the present invention has the bonus that there is a consequent reduction in any undesirable colour that

- 6 -

the photochromic materials may impart in the bleached state, either by way of inherent colour of the material itself or by the formation of coloured fatigue / degradation products through use of the photochromic material.

Typical host materials are optically clear polymer materials, such as polymers of polyol (allyl carbonate) - monomers, polyacrylates such as polymethylmethacrylates, cellulose acetate, cellulose triacetate, cellulose acetate propionate, cellulose acetate butyrate, poly(vinyl acetate), poly(vinyl alcohol), polyurethanes, polycarbonate, polyethylene terephthalate, polystyrene, poly(triethyleneglycol dimethylacrylate), poly(diethyleneglycol bis(allyl carbonate)) and various copolymer mixes.

The pyran compounds of the present invention may be prepared by a general method which is based on the following reaction scheme:

This general synthetic methodology has been described in detail, for example, by L. Merlini in 'Advances in Heterocyclic Chemistry,' 1975, vol. 18, page 159, and by R. Guglielmetti in "Photochromism: Molecules and Systems," Studies in Organic Chemistry 40, chp. 8, Eds. H Dürr and H. Bouas-Laurent, Elsevier, 1990, and also in several patent documents, for example, U. S. Patent No. 5,066,818; U. S. Patent No. 4,990,287, WO 92/09593 and WO95/05382. The synthesis of the propargyl alcohols shown in the scheme above are obtained in a known manner, for example, T. F. Rutledge in 'Acetylenic Compounds,' Reinhold, New York, 1968. The 1-naphthols and related hydroxy compounds are either commercially available or obtained by known synthetic methods, or derived from such methods. Some of the 1-naphthols and related hydroxy compounds or precursors thereof have been described in the chemical literature, for example, ethyl 1-acetoxydibenzo thiophene-3-carboxylate see (S. Gronowitz *et al.*, Acta. Pharm. Suec., 1978, 15, 337) and 3-hydroxypropyl-1-naphthol see (R. F. Frank *et al.*, J. Chem. Soc., Chem. Commun., 1984, 761). The use of the Stobbe condensation to prepare 1-naphthols has also been discussed (see Organic Reactions 1951, 6, 1).

- 7 -

The acid catalyst may be selected from acidic alumina (Brockmann 1), acetic acid, trifluoroacetic acid, silica, clays (e.g. montmorillonite, tonsil) or acidic exchange resins.

Organic solvents frequently employed for the reaction include benzene, toluene, xylene and relatively high boiling alkanes.

- 8 -

The following examples illustrate but do not limit the invention:

Example 1: Methyl 9-methoxy-2-phenyl-2-(2-thienyl)-2H-naphtho[1,2-b]pyran-5-carboxylate

(a) Ethyl 4-acetoxy-6-methoxy-2-naphthoate

A solution of freshly distilled *p*-anisaldehyde (20g, 146.9 mmol) and diethyl succinate (38.4g, 220.3 mmol) in anhydrous ethanol (50 cm³) was added dropwise over 45 minutes to a vigorously stirred warm ~ 40 - 50 °C, solution of sodium ethoxide (from sodium 6.75g, 293.8 mmol) in anhydrous ethanol (450 cm³) under N₂. On completion of the addition the solution was refluxed for 4 hours and then cooled to room temperature.

The reaction mixture was reduced to ~ 1/5 of the original volume and the resulting viscous oil was diluted with water (700 cm³), cautiously acidified with c. HCl and the resulting two phase mixture extracted with ethyl acetate (5 x 100 cm³). The combined EtOAc solutions were extracted with aq. sat. NaHCO₃ solution (6 x 100 cm³). The combined aq. NaHCO₃ solutions were cautiously acidified with c. HCl and the resulting two phase mixture extracted with EtOAc (4 x 100 cm³). The combined EtOAc extracts were dried (Na₂SO₄) and evaporated to afford a yellow mobile oil.

A solution of the foregoing yellow oil and anhydrous sodium acetate (12.05g, 146.9 mmol) in acetic anhydride (180 cm³) was refluxed for 3 hours. The solution was cooled to room temperature and then diluted with water (2000 cm³) and allowed to stir for 1.5 hours. The resulting pale brown solid was collected by vacuum filtration, washed well with water (~500 cm³) and air dried.

The solid was recrystallised from EtOAc / hexane and Norit (activated charcoal) to give ethyl 4-acetoxy-6-methoxy-2-naphthoate (yield = 21.2 g, theoretical yield = 42.35 g, 50 %, m. p. = 103.5 -104.5 °C (uncorrected)).

(b) Methyl 4-hydroxy-6-methoxy-2-naphthoate

- 9 -

A solution of ethyl 4-acetoxy-6-methoxy-2-naphthoate (3.0g, 10.4 mmol) and sodium hydroxide (2.5g, 62.5 mmol) in water (60 cm³) and ethanol (15 cm³) was maintained at 80 - 90 °C for 3 hours. The cooled solution was poured into water (400 cm³) and cautiously acidified with c. HCl. The resulting suspension was extracted with EtOAc (5 x 75 cm³). The combined extracts were dried (Na₂SO₄) and evaporated to give a pale brown solid. This solid was dissolved in methanol (50 cm³) containing c. H₂SO₄ (~ 1 cm³) and was refluxed for 4 hours. The cooled mixture was diluted with water (500 cm³) and extracted with EtOAc (4 x 50 cm³). The combined extracts were washed with aq. sat. NaHCO₃ (2 x 100 cm³) and water (100 cm³). Removal of the dried (Na₂SO₄) EtOAc gave a pale brown solid which was recrystallised from EtOAc/hexane to afford methyl 4-hydroxy-6-methoxy-2-naphthoate (yield = 1.63g, theoretical yield = 2.41g, 68%, m.p. = 193 - 195 °C (uncorrected)).

(c) Methyl 9-methoxy-2-phenyl-2-(2-thienyl)-2H-naphtho[1,2-*b*]pyran-5-carboxylate

A solution of methyl 4-hydroxy-6-methoxy-2-naphthoate (0.45g, 1.8 mmol) and 1-(4-morpholinophenyl)-1-(2-thienyl)prop-2-yn-1-ol (0.55g, 1.8 mmol) in toluene (45 cm³) containing acidic alumina (Brockmann 1), (4.0g) was refluxed for 60 minutes. The cooled solution was filtered and the alumina was washed well with EtOAc (200 cm³). Removal of the solvent gave an oil which solidified on standing at RT. Recrystallisation twice from EtOAc/hexane gave methyl 9-methoxy-2-phenyl-2-(2-thienyl)-2H-naphtho[1,2-*b*]pyran-5-carboxylate (yield = 0.49 g, theoretical yield = 0.93g 52%, m.p. = 186 - 188 °C (uncorrected)).

SUBSTITUTE SHEET (RULE 26)

- 10 -

Example 2: Methyl 9-methoxy-2-(4-morpholinophenyl)-2-phenyl-2H-naphtho[1,2-*b*]pyran-5-carboxylate, m.p. = 175 - 177 °C (uncorrected). This compound was obtained by a similar protocol to example 1 above using the requisite starting materials.

Example 3: Methyl 9-methoxy-2,2-bis(4-pyrrolidinophenyl)-2H-naphtho[1,2-*b*]pyran-5-carboxylate, m.p. = 210 - 215 °C (uncorrected). This compound was obtained by a similar protocol to example 1 above using the requisite starting materials.

Example 4: Methyl 9-methoxy-2-phenyl-2-(4-piperidinophenyl)-2H-naphtho[1,2-*b*]pyran-5-carboxylate, m.p. = 164 - 167 °C (uncorrected). This compound was obtained by a similar protocol to example 1 above using the requisite starting materials.

- 11 -

Example 5: Methyl 2-(4-methoxyphenyl)-2-(4-morpholinophenyl)-2H-naphtho[1,2-*b*]pyran-5-carboxylate, m.p. = 177 - 179 °C (uncorrected). This compound was obtained by a similar protocol to example 1 above using the requisite starting materials.

Example 6: Methyl 7,9-dichloro-2-(4-pyrrolidinophenyl)-2-phenyl-2H-naphtho[1,2-*b*]pyran-5-carboxylate, m.p. = 162 - 165 °C (uncorrected). This compound was obtained by a similar protocol to example 1 above using the requisite starting materials.

Example 7: Methyl 7-fluoro-2-(4-piperidinophenyl)-2-phenyl-2H-naphtho[1,2-*b*]pyran-5-carboxylate, m.p. = 165 - 168 °C (uncorrected). This compound was obtained by a similar protocol to example 1 above using the requisite starting materials.

Comparative example 1: 2-(4-morpholinophenyl)-2-phenyl-2H-naphtho[1,2-*b*]pyran, m.p. = 131 - 134 °C (uncorrected).

- 12 -

Comparative example 2: Methyl 9-methoxy-2,2-bis(4-methoxyphenyl)-2H-naphtho[1,2-*b*]pyran-5-carboxylate

(a) Ethyl 4-acetoxy-6-methoxy-2-naphthoate

A solution of freshly distilled *p*-anisaldehyde (20g, 146.9 mmol) and diethyl succinate (38.4g, 220.3 mmol) in anhydrous ethanol (50 cm³) was added dropwise over 45 minutes to a vigorously stirred warm ~ 40 - 50 °C, solution of sodium ethoxide (from sodium 6.75g, 293.8 mmol) in anhydrous ethanol (450 cm³) under N₂. On completion of the addition the solution was refluxed for 4 hours and then cooled to room temperature.

The reaction mixture was reduced to ~ 1/5 of the original volume and the resulting viscous oil was diluted with water (700 cm³), cautiously acidified with c. HCl and the resulting two phase mixture extracted with ethyl acetate (5 x 100 cm³). The combined EtOAc solutions were extracted with aq. sat. NaHCO₃ solution (6 x 100 cm³). The combined aq. NaHCO₃ solutions were cautiously acidified with c. HCl and the resulting two phase mixture extracted with EtOAc (4 x 100 cm³). The combined EtOAc extracts were dried (Na₂SO₄) and evaporated to afford a yellow mobile oil.

A solution of the foregoing yellow oil and anhydrous sodium acetate (12.05g, 146.9 mmol) in acetic anhydride (180 cm³) was refluxed for 3 hours. The solution was cooled to room temperature and then diluted with water (2000 cm³) and allowed to stir for 1.5 hours. The resulting pale brown solid was collected by vacuum filtration, washed well with water (~500 cm³) and air dried.

The solid was recrystallised from EtOAc / hexane and Norit (activated charcoal) to give ethyl 4-acetoxy-6-methoxy-2-naphthoate (yield = 21.2 g, theoretical yield = 42.35 g, 50 %, m. p. = 103.5-104.5 °C (uncorrected)).

- 13 -

(b) Methyl 4-hydroxy-6-methoxy-2-naphthoate

A solution of ethyl 4-acetoxy-6-methoxy-2-naphthoate (3.0g, 10.4 mmol) and sodium hydroxide (2.5g, 62.5 mmol) in water (60 cm³) and ethanol (15 cm³) was maintained at 80 - 90 °C for 3 hours. The cooled solution was poured into water (400 cm³) and cautiously acidified with c. HCl. The resulting suspension was extracted with EtOAc (5 x 75 cm³). The combined extracts were dried (Na₂SO₄) and evaporated to give a pale brown solid. This solid was dissolved in methanol (50 cm³) containing c. H₂SO₄ (~ 1 cm³) and was refluxed for 4 hours. The cooled mixture was diluted with water (500 cm³) and extracted with EtOAc (4 x 50 cm³). The combined extracts were washed with aq. sat. NaHCO₃ (2 x 100 cm³) and water (100 cm³). Removal of the dried (Na₂SO₄) EtOAc gave a pale brown solid which was recrystallised from EtOAc/hexane to afford methyl 4-hydroxy-6-methoxy-2-naphthoate (yield = 1.63g, theoretical yield = 2.41g, 68%, m.p. = 193 - 195 °C (uncorrected)).

(c) Methyl 9-methoxy-2,2-bis(4-methoxyphenyl)-2H-naphtho [1,2-b]pyran-5-carboxylate.

A solution of methyl 4-hydroxy-6-methoxy-2-naphthoate (1.0g, 4.3 mmol) and 1,1-di(4-methoxyphenyl)prop-2-yn-1-ol (1.16g, 4.3 mmol) in toluene (45 cm³) containing acidic alumina (Brockmann 1), (4.0g) was refluxed for 45 minutes. The cooled solution was filtered and the alumina was washed well with EtOAc (200 cm³). The organic filtrate was washed with aqueous sodium hydroxide (2M, 2 x 50 cm³) and water (100 cm³). Removal of the dried (Na₂SO₄) EtOAc gave an oil which was flash chromatographed over silica using 25% EtOAc in hexane as the eluent to afford a pale yellow solid. Recrystallisation from EtOAc/hexane gave methyl

9-methoxy-2,2-bis(4-methoxyphenyl)-2*H*-naphtho[1,2-*b*]pyran-5-carboxylate
(yield = 0.79g, theoretical yield = 2.08g 38%, m.p. = 162.5 - 164.0 °C
(uncorrected)).

CLAIMS:

1. A naphtho[1,2-*b*]pyran of general formula (I)

wherein one or both of R¹ and R² is a 4-aminoaryl group;

R⁵ is selected from linear or branched C₁-C₁₀ alkyl, C₁-C₂₀ cycloalkyl, C₁-C₂₀ bicycloalkyl, C₁-C₂₀ polycycloalkyl, linear or branched C₁-C₁₀ haloalkyl, linear or branched C₁-C₁₀ perhaloalkyl, linear or branched C₁-C₁₀ perhaloalkenyl, linear or branched C₁-C₁₀ alkenyl, C₁-C₁₀ alkynyl, linear or branched C₁-C₁₀ alkoxy, linear or branched C₁-C₁₀ alkylthio, linear or branched C₁-C₁₀ alkoxy (linear or branched C₁-C₁₀ alkyl), linear or branched C₁-C₁₀ hydroxyalkyl, linear or branched C₁-C₁₀ aminoalkyl, aryl, phenyl, heteroaryl, halogen, nitrile, nitro, amino, linear or branched C₁-C₂₀ alkoxycarbonyl, hydroxyl, formyl, acetyl, amido, C₁-C₃ alkyl amido, C₁-C₃ dialkylamido, aroyl, benzoyl, alkyl C₁-C₃ amino, dialkyl C₁-C₃ amino, arylamino, diarylamino, aryl C₁-C₃ alkylamino and cyclicamino groups; arylsulfinyl, arylsulfanyl, arylsulfonyl, linear or branched C₁-C₁₀ alkylsulfonyl, P(O)(O-C₁-C₁₀ alkyl)₂ or is the alkenyl function:

-16-

wherein R^{11} and/or R^{12} and/or R^{13} is hydrogen or is as defined for R^5 and R^3 , R^4 and $R^6 - R^{10}$ are each hydrogen or as defined for R^1 , R^2 or R^5 .

2. A naphtho[1,2-*b*]pyran according to claim 1, wherein the amino group alkyl is C_1-C_5 amino, dialkyl C_1-C_5 amino, arylamino, diarylamino, aryl C_1-C_5 alkylamino or a cyclicamino group.

3. A naphtho[1,2-*b*]pyran according to claim 1 or 2, wherein the 4-aminoaryl group is further substituted in addition to the specified amino function and in any remaining positions, with hydrogen, C_1-C_5 alkyl, C_1-C_5 haloalkyl, C_1-C_5 perhaloalkyl, C_1-C_5 alkoxy, C_1-C_5 alkylthio, C_1-C_5 hydroxyalkyl, C_1-C_5 alkoxy, C_1-C_5 alkyl, C_1-C_5 aminoalkyl, halogen, C_1-C_5 alkoxycarbonyl, formyl, nitrile, carboxyl, acetyl, amino, alkyl C_1-C_5 amino, dialkyl C_1-C_5 amino, arylamino, diarylamino, aryl C_1-C_5 alkylamino or a cyclicamino group.

4. A naphtho[1,2-*b*]pyran according to claim 1, 2 or 3, wherein the cyclicamino group is aziridino, pyrrolidino, piperidino, morpholino, thiomorpholino, indolino, piperazino, C_1-C_5 *N*-Alkylpiperazino or *N*-aryl piperazino.

5. A naphtho[1,2-*b*]pyran according to any of claims 1, 2, 3 or 4 of the general formula II, III or IV:

SUBSTITUTE SHEET (RULE 26)

-17-

wherein R^{14} and R^{15} are as defined for R^3, R^4, R^6, R^{10}

6. A naphtho[1,2-*b*]pyran according to claim 5 of general formula V or VI:

wherein X is selected from O, S, SO, SO₂, Se, NH, N-linear or branched C₁-C₁₀ alkyl, N-aryl, N-heteroaryl, N-linear or branched C₁-C₁₀ haloalkyl, N-linear or branched C₁-C₁₀ perhaloalkyl, N-linear or branched C₁-C₁₀

-18-

hydroxyalkyl, N-linear or branched C₁-C₁₀ alkoxyalkyl, benzyl, substituted benzyl, tosyl.

7. A naphtho[1,2-*b*]pyran according to any preceding claim, wherein R¹ is 4-morpholinophenyl, 4-piperidinophenyl, 4-dimethylaminophenyl or 4-pyrrolidinophenyl and R⁵ is methoxycarbonyl.
8. A naphtho[1,2-*b*]pyran according to any of claims 1 to 6, wherein R¹ and R² are each 4-pyrrolidinophenyl and R⁵ is methoxycarbonyl.
9. A naphtho[1,2-*b*]pyran according to any of claims 1 to 6, wherein R¹ is 4-morpholinophenyl, R² is 4-methoxyphenyl and R⁵ is methoxycarbonyl.
10. A naphtho[1,2-*b*]pyran according to any of claims 1 to 6 wherein R¹ is 4-morpholinophenyl, R² is 2-thienyl and R⁵ is methoxycarbonyl.
11. A polymeric host material including a naphtho[1,2-*b*]pyran according to any preceding claim.
12. A polymeric host material according to claim 11, wherein the material is a plastic or a glass.
13. A window, an optical filter, an ophthalmic lens or a sunglass lens made from a polymeric host material according to claim 11 or 12.

INTERNATIONAL SEARCH REPORT

International Application No

PCT/GB 98/00905

A. CLASSIFICATION OF SUBJECT MATTER

IPC 6 C07D311/92 C07D311/78 C07D409/04 G02B5/23

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 6 C07D G02B

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

| Category * | Citation of document, with indication, where appropriate, of the relevant passages | Relevant to claim No. |
|------------|--|-----------------------|
| Y | WO 95 16215 A (PPG INDUSTRIES INC) 15 June 1995 see the whole document see in particular examples page 12 | 1-13 |
| Y | EP 0 250 193 A (PLESSEY CO PLC) 23 December 1987 cited in the application see the whole document see in particular example 9 | 1-13 |
| Y | WO 96 04576 A (PPG INDUSTRIES INC) 15 February 1996 see the whole document | 5,7-13 |
| | -/-- | |

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

* Special categories of cited documents :

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "E" earlier document but published on or after the international filing date
- "L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family

Date of the actual completion of the international search

24 June 1998

Date of mailing of the international search report

17.07.98
